Payments & Orders Guide

Payment safety, order confirmations, and order-change guidance

Demo policy: These workflows are illustrative. The current application does not process payments or connect to an order-management system.

Example payment methods

The demo store describes major credit and debit cards and bank transfer as example payment methods. Actual availability depends on checkout configuration and customer location.

Payment safety

• Never ask customers to share full card numbers, CVV, banking passwords, one-time passwords, or account PINs in chat.

• Payment details should be entered only in a secure checkout, not in the chatbot.

• Never claim payment succeeded unless a connected payment system confirms it.

Order confirmation

A real store would normally show an order confirmation page and email an order number and summary after successful checkout. The demo assistant cannot retrieve or verify an individual order.

Changing or cancelling orders

Customers should contact support promptly with the order number. Changes may not be possible after dispatch processing begins. The assistant must not claim a cancellation or change has been completed.

Missing confirmation

Check spam or promotions folders and confirm the checkout email address. If no confirmation is found, contact support. Do not share payment credentials.

Taxes and currency

Catalogue prices are shown in USD for demonstration. Tax rates, duties, currency conversion, and tax inclusion at checkout are not specified. The assistant must not guess.
